                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention is directed to novel methods for reducing gastric motility and delaying gastric emptying, comprising the administration of an amylin or an amylin agonist. The invention is useful for reducing gastric motility and delaying gastric emptying for therapeutic and diagnostic purposes. The invention is also useful for treating conditions associated with elevated, inappropriate or undesired post-prandial blood glucose levels and treating ingestion of a toxin. The present sequence is

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   motility and delaying gastric emptying which comprises the administration of an amylin or an amylin agonist. The invention is useful for treating postprandial dumping syndrome, postprandial hyperglycemia and reducing gastric motility associated with gastrointestinal disorders such as spasm or delaying gastric emptying in a mammal undergoing a gastrointestinal diagnostic procedure such as radiological examination and magnetic resonance imaging. The invention is also useful for lowering postprandial blood glucose levels during treatment of diabetes. The present sequence is human amylin agonist peptide analogue. This sequence is used in the
New amylin agonist peptide(s) - used for treatment and prevention

The patent discloses a composition which can be used to reduce or suppress food intake, control appetite or control body weight in a mammal, comprising an amylin agonist and a cholecystokinin (CCK) agonist admixed in a form suitable for therapeutic administration. Also disclosed are new hybrid peptides comprising an amylin agonist peptide joined to a CCK agonist via a covalent linking group (see AAW22540 - AAW22551). Purther disclosed are new hybrid peptides which incorporate features of amylin agonist peptides and CCK agonist peptides but which do not employ a linking group. These peptides are of general formula R1-C-R2-C-R3-R4-R5, in which R1 = a free N-terminus or an amidated N-terminus or and the composition of the compos
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This peptide is an example of amylin agonists of the invention which can be used as hyperglycaemics. The peptide is an analogue of human amylin which mimics the effects of the wild-type hormone. Preferred peptides are used in admixture with insulin for the treatment of diabetes mellitus or with glucagon for the treatment of hypoglycaemic conditions. See AAR37779 -R37795 and AAR38809-R38826.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to fusion proteins comprising human serum albumin (ADH21530) and a therapeutic polypeptide such as a therapeutic protein, antibody or peptide or their variants or fragments. The therapeutic protein may be fused to the N-terminus, the C-terminus or both termini of albumin via a linker. The albumin component of the fusion proteins proteins compared with those of the corresponding therapeutic proteins on their own. The invention also relates to nucleic acids albumin fusion protein, vectors and host cells comprising an encoding albumin fusion protein, the method of extending the shelf-life of a clubumin fusion protein, the method of extending the shelf-life of a clubumin fusion protein, the method of extending the shelf-life of a clusing an albumin fusion protein. The albumin fusion proteins may be used in the treatment of metabolic/endocrine disorders, diabetes and diabetes and type 1 and type 2 diabetes, hyperglycaemia, neural disorders (especially neuropathy), retainpathy, cardiovascular disorders consisted and the neuropathy), retainpathy, cardiovascular disorders also be used in a method of maintaining a basal glucose level in a consistent consistent and in a method for losing weight. The present sequence is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches

                                                                                                                                                               Treatment of a patient with anorexia or related condition comprises admin. of amylin or an analogue in an amt. sufficient to increase the amylin level in the plasma of the patient. The pref. amylin analogues are given in AAR29197-222. Treating a patient deficient in adipose tissue comprises admin. of amylin or an analogue and/or insulin in an amt. and ratio sufficient to increase adipose tissue. Typical dosage units contain 0.1-10 mg of amylin analogue and 0.1-1 mg of insulin. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       amylin level in the plasma of the patient. The pref. amylin analogues given in AAR99197-222. Treating a patient deficient in adipose tissue comprises admin. of amylin or an analogue and/or insulin in an amt. an ratio sufficient to increase adipose tissue. Typical dosage units cont 0.1-10 mg of amylin analogue and 0.1-1 mg of insulin. (Updated on 25-12003 to correct PN field.)

                                                                                                                                                                                                                                                                                                                                                                    This peptide is an example of amylin agonists of the invention which can be used as hyperglycaemics. The peptide is an analogue of human amylin which mimics the effects of the wild-type hormone. Preferred peptides are used in admixture with insulin for the treatment of diabetes mellitus or with glucagon for the treatment of hypoglycaemic conditions. See AAR37779 -R37795 and AAR38809-R38826.                                                                                                                                                                                                                                                                                              Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                     Sequence
